

# Inventory Management System for Yahoo Store

Yahoo store inventory management makes it very easy for Yahoo store owners to manage their inventory. You can either upload updated inventory to your Yahoo store as you receive it in your warehouse or make use of the real-time feature that automatically updates the inventory when an order is placed.

The standard Yahoo store inventory management system that comes with your initial store isn't enough-your business may need additional tools to manage your inventory and give you more information about the status of your products. Kaizen provides a system that takes the drudgery out of inventory management.

## Did you know?

An unlimited number of stores can be added to the system and effortlessly managed. And what's more-it works in real time to keep your inventory in order at all times.

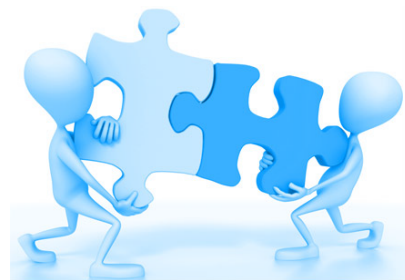

**Why The Standard Yahoo Inventory Just Doesn't Cut It: If a given product comes in three colors, your native Yahoo inventory interface will show all three colors to a customer who is shopping for the product, even when one or more of the colors are out of stock. The customer realizes the product is out of stock only when s/he is on the brink of checkout. Kaizen's custom-built, real-time Yahoo store inventory management system is programmed to display only those colors that are currently available, alleviating that potential customer frustration.**

Kaizen Inventory Management System comes with built-in Order Management and Product Management functionality. The inventory management system is easily integrated into your existing Yahoo! store and offers full control of your Yahoo store inventory from the backend panel.

## Our versatile solution features the following value additions:

- Offers an entirely customizable solution for your Yahoo! Store
- Works with any kind of Yahoo store
- Enables super fast management of inventory, orders, and products
- Tracks inventory and costs using barcodes
- Provides comprehensive reporting
- Shows real-time availability of product/s

# Inventory Management System for Yahoo Store

The admin panel that comes with our Inventory Management System is user friendly and extremely fast. It will enable you to quickly and effectively manage your Yahoo! store inventory. The hosting for this solution can be provided either on the Yahoo! Store server or a separate server with SSL certificates.

## The admin panel for your Yahoo! store is explained here using screenshots:

- 1). The gateway to the admin panel for your Yahoo! store real-time inventory is highly secure and can be accessed through the login panel shown here :

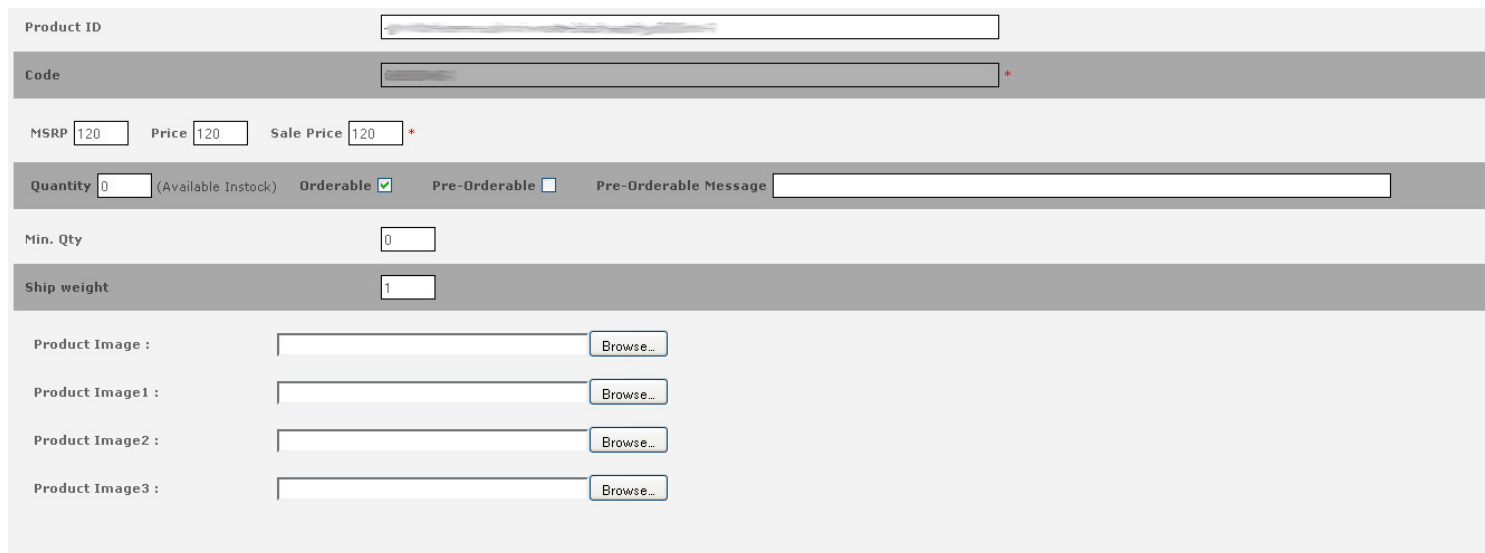

The login panel features the KaiZen commerce logo on the left. On the right, there are two input fields labeled 'Username' and 'Password', followed by a 'Login' button with a key icon.

- 2). Here you can upload the CSV file containing the product codes and quantities to manage the real-time inventory for your Yahoo! store. As soon as the CSV file is uploaded, it will start corresponding to your published Yahoo! store inventory in real time:

The 'Upload CSV File' panel includes the heading 'Upload CSV File :'. Below it, there is an 'Import File :' label followed by a text input field, a 'Browse...' button, and a 'Submit' button.

- 3). This uploaded inventory can now be used to view or verify the codes and quantities for your products. You can also modify this product inventory from the panel shown below. Any changes are reflected in the online inventory in real time:

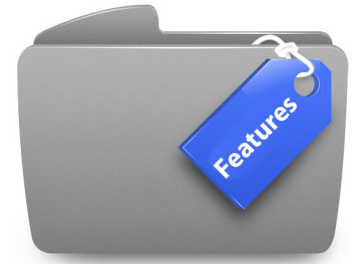

The product inventory management panel contains several input fields and checkboxes. It includes fields for 'Product ID', 'Code', 'MSRP' (120), 'Price' (120), 'Sale Price' (120), 'Quantity' (0), 'Min. Qty' (0), and 'Ship weight' (1). There are also checkboxes for 'Orderable' (checked), 'Pre-Orderable', and a 'Pre-Orderable Message' field. At the bottom, there are four rows for 'Product Image' (Image 1, 2, 3) with corresponding 'Browse...' buttons.
