

## Kaizen's warehouse management system (WMS) does the following:

- enables centralized management of the movement and storage of materials throughout your warehouse
- provides critical information necessary for you to make daily business decisions, all of which have a direct impact on your customers, suppliers, and your profit margins.
- facilitates functions such as shipping, receiving, put-away, and locating a product
- makes warehouse operations more productive, efficient, and profitable
- provides information necessary to efficiently control the movement of materials within a warehouse

Our solution - as part of our backoffice automation system - provides procedures that manage your stock from within a warehouse facility, and enables a seamless link to order processing and logistics management.

## We offer only custom solutions-built just for you.

The warehouse management system can be:

- a standalone system
- a module of an ERP system
- a supply chain execution suite -depending on your business needs and other preferences

Inventory management, inventory planning, order management, shipping management, cost management, IT applications, and communications technology are all related to warehouse management.

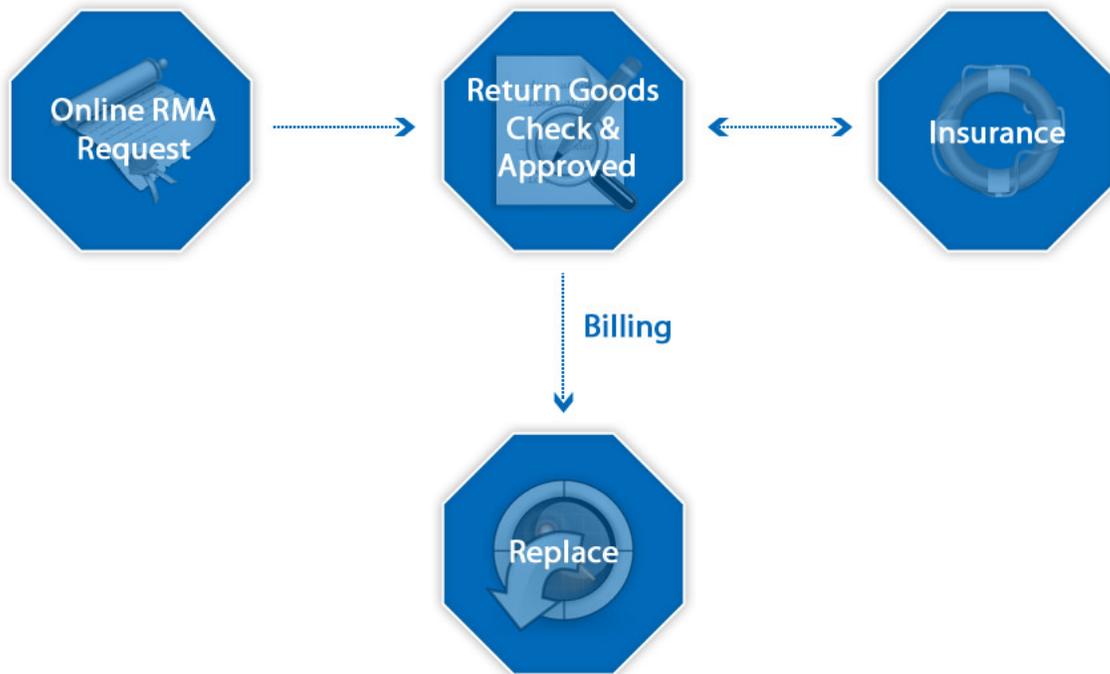

If you are looking for an effective warehouse management solution, you have found it here with Kaizen.

## Warehouse Order Management:

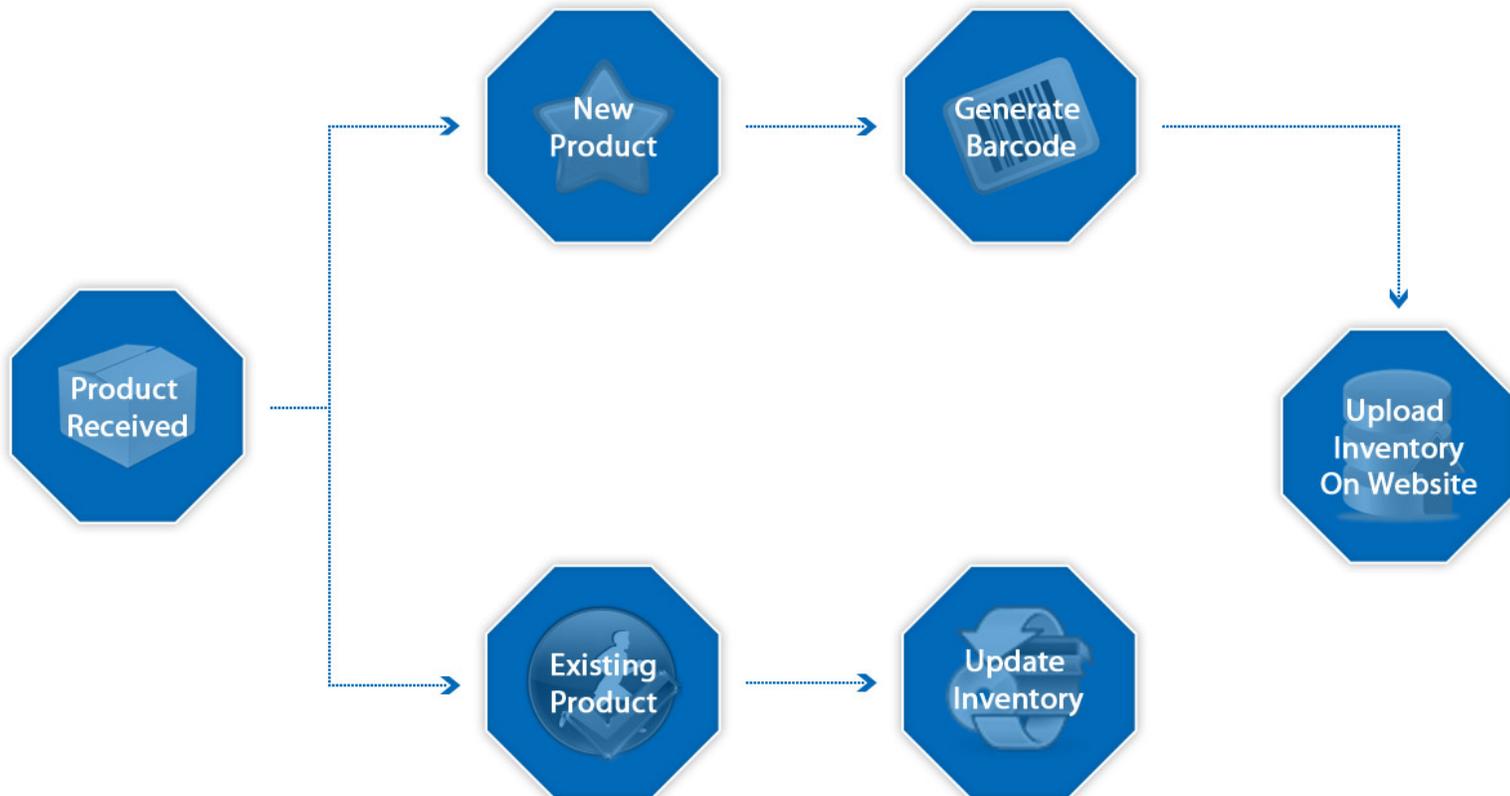

**Warehouse Management =**  
 an effective synchronization of advanced technology and processes involved  
 in the storage and dispatch of goods to the end consumer

Warehouse RMA Management:

Warehouse Product Management:

## warehouse management system Benefits

- Faster inventory turns
- More efficient use of available warehouse space
- Reduction in inventory paperwork
- Improved cycle counting
- Reduced dependency on warehouse personnel
- Enhanced customer service
- Improved labor productivity

All of the above and more benefits are configured into Kaizen's WMS.

## Kaizen's WMS provides managers with a clear description of:

- How much inventory exists in the warehouse
- How many orders are currently being shipped
- What stages of processing the pending orders are at
- Staff productivity details
- Goods shipped by the warehouse over a given period of time

Warehouse management systems have typically been associated with complex distribution operations. However, even small and midsize companies are now increasingly recognizing the significance of warehouse management systems. The current business environment consists of just-in-time delivery, integrated logistics, and e-commerce fulfillment. Our WMS is completely custom-built to your specifications and/or requirements.

If you have any questions regarding the development or refurbishment of a warehouse management system for your business, please contact us.

## A Warehouse Management System in a Nutshell

In practice, a successful WMS solution is designed to combine computer hardware, software, and peripheral equipment with improved operating practices for managing inventory, space, labor, and capital equipment in warehouses and distribution centers.

**Implementing a WMS helps increase competitive advantage** by reducing labor costs, improving customer service, increasing inventory accuracy, and improving flexibility and responsiveness.

A WMS enables a company to **manage inventory** in real time, with information as current as the most recent order, shipment, or receipt and any movement in between.
