Java for e-Commerce Development

Kaizen's programmers specialize in developing, managing, and enhancing Java e-Commerce websites. The benefits that can accrue from using Java are countless!

What's Java?

- A powerful, cross-platform, object-oriented programming language for writing code for distributed applications for corporate networks.
- Flexible, interactive, accessible, & secure.
- Portable across Windows server, Linux, or UNIX systems.
- Has a programming option to create modules for repeated use.
- Has an option that offers watertight security.
- Easy to use, robust, and portable.

You can run Java from just about any platform or Java Virtual Machine (JVM), regardless of any computer architecture. Java is used to develop programs that run within a web browser, allowing Kaizen experts to "write once and run everywhere." It is a popular programming language that makes playing games, chatting, and viewing 3D images possible and can also be used for intranet applications.

> Java's additional security features have helped make it the most preferred programming language for Internet solutions the world over.
